

## 1. Product Name

Chlorine Tablets

## 2. Product Code

814316

## 3. Brief Description

In connection with the occurrence of bacteria in tap water and in order to keep the water fresh and pure, we recommend to use demineralized water or water with chlorine tablets.

Fill the bubble tube with water and add pure chlorine tablets. (used also in swimming pools)

\* 1 tablet of 1.8 grams by 10 liters of water (this can smell unpleasant in the beginning).

The active chlorine is wears off after about one to six months. Influences like daylight dearies the period as well as helps bacteria to develop.

## 4. Use

In connection to the pressure of bacteria (for example Legionella) in tap water and in order to keep water fresh and clear, we recommend the following for the maintenance of your bubble tube:

Option 1: Fill the bubble tube with demineralized water. Check periodically if water is still clear and cloudy. (available by Nenko or other shops.)

Option 2: Fill the bubble tube with tap water and add pure chlorine tablets =  
1 tablet of 1.8 grams by 10 liters of water (this can smell unpleasant in the beginning)

Bubble tube:

Hight	Diameter	Liters	Tablets
100 to 150 cm	15 cm	± 15-22	2 tablets
170 to 220 cm	15 cm	± 25-33	3 tablets
120 cm	20 cm	± 32	3 tablets
150 cm	20 cm	± 39	4 tablets
170 to 200 cm	20 cm	± 45-52	5 tablets
220 cm	20 cm	± 59	6 tablets

When refilling only use demineralized water or tap water with added chlorine. Leave for 24 hours before the addition.

The tube should be completely refilled if it discolors. The active chlorine is worn off after approximately one to six months, depending on external points like sunlight and use. New chlorine tablets can be ordered by Nenko.
