

1. Name of the product

fiber optics 150 tubes x 2m

2. Product code

17907112

3. Description

Maximum safety in fiberglass wires, these fiberoptic strands made of plastic are the safest option. However, all fiberoptic products should only be used under supervision. Only works in combination with a light source (not included). Robust, bright and durable.

4. Contents

1x fiber optic strands 150 x 2m

A light source is necessary. This must be purchased separately (18517). Therefore, also read the separate user manual for the light source. For added safety, the ends of the fiber optics have protected tops.

5. Sensory stimulations

See

6. Safety

Fiber optic products are a constant source of safe tactile and visual stimulation. However, always use them only under professional supervision. Even though it is safe to brush the wires along the face, never put them in the mouth.

Periodically clean the fiber optics with a clean damp cloth. Switch off the light source first.

7. Installation

1. Remove the packaging and temporary bonds that keep the fibers bound together.
2. Connect the fiber optics to the light source – to do this, insert the button (metal cylinder at the other end of the wires) into the port (metal hollow cylinder) of the light source. See also the instructions for use of the light source. The metal knob is 30mm in diameter, which means that this fiber optics fits all Nenko light sources.

8. Commissioning

When using a light source with a color wheel, the fiber mist will show a constant color change along the entire length. The changing colors are visually stimulating and encourage focusing. At the same time, they are soothing and relaxing.

The fiber optics provide a fascinating tactile stimulation. Some ideas for use are:

1. For example, attach the light source to the wall or in a lined base, with the wires facing down for the effect of a waterfall.
2. Spreads the wires, and shows that they are safe to touch.
3. Fan out the tips of the wires to spread a colored light over the hands or face.
4. Spread the wires on a mat and let a person lie or sit on it.
5. Wrap the wires around the limbs or the whole body.
6. Weave the strands through a sweater, apron or net, which can then be draped on a person.
7. Use the fiber optics interactively with a switching system.

9. Maintenance

Fiber optics provide great visual and tactile stimulation. However, these products should always be used under targeted adult supervision. Fiber mists are safe when used properly under supervision. Nenko cannot take any liability for damage or injury caused by misuse of this product. These fiber mist threads are slightly thicker than the standard fiber mists.

The fiber mist threads can be cleaned by a damp cloth with possibly a mild cleaning agent. **NOTE:** make sure that the metal button does not get damp. Dry the wires thoroughly before use. Do not hang the fiber mist threads in water.
