

## 1. Product Name

Jumbo bamboo fiber spray transparent 2 m x 20 strands

## 2. Product Code

20475112

## 3. Description

Visually attractive as you are used to with fiber spray - and also with a high tactile power! Sturdy, transparent strands in the form of bamboo sticks enclose the fiber-spray threads for safety. Works on a light source (to be ordered separately). Easy grip. With contracted ends. Phthalate free.

## 4. Content

1x Jumbo bamboo fiber spray transparent 2 m x 20 strands

## 5. Senses stimulations

See and feel

## 6. Maintenance

- Periodically delete the fiber optic, first switch off the light source.
- Use a mild detergent and a slightly damp cloth, taking care not to wet the hub.
- Dry thoroughly before reuse.
- Do not immerse the fiberglass in water.
- Do not walk or allow the fiber to be squashed, squeezed, bent completely, etc. - once flattened or fully bent, the light will stop at that point and it is unlikely that it will go through the ends of the fiber.

## 7. Installation

1. Remove the packaging and temporary bands that hold the wires together.
2. Attach the hub to the light source - insert the hub (metal cylinder opposite the ends) into the opening (cylindrical metal tube) of the light source. When used with fiber optics, it may be necessary to adjust the position of the hub in the port (i.e., not pushed all the way in) to allow as many strands as possible to be illuminated.
3. Consult the separate instructions for your light source.

## 8. Safety

- Fiber optic products are a safe visual and tactile stimulation with correct use.
- Use under professional supervision.
- Although stroking the face is safe, the locks should never be put in the mouth. This fiber optic is extremely strong and resists breaking if it is bitten, but users should not be encouraged to take it.
- Ensure that the client does not do anything unsafe with the length, such as wrapping around the neck or limb to reduce blood flow or air.
- For indoor use only.
